Doubly Quantified Statements

For each of the quantified statements below, please do three things:

(1) Decide whether the statement is true or false.
(2) Justify the truth value.
(3) Write the negation, simplifying as much as possible, which means until there are no more negation signs in your answer.

You will need to watch the video on doubly quantified statements before working through the examples below.

1. Statement: $\forall x \in \mathbb{R}, \exists y \in \mathbb{R}$ so that $2x + y = 3$.

Truth value:

Justification:

Negation:

---

2. Statement: $\exists x \in \mathbb{R}$, so that $\forall y \in \mathbb{R}, \ 2x + y = 3$.

Truth value:

Justification:

Negation:

3. Statement: $\forall z \in \mathbb{Q}, \exists w \in \mathbb{Z}$ so that $zw \in \mathbb{Z}$.

Truth value:

Justification:

Negation:

---

4. Statement: $\forall x \in \mathbb{N}, \exists y \in \mathbb{N}$ so that $xy = 2$.

Truth value:

Justification:

Negation:

---

5. Statement: $\exists a \in \mathbb{Z}$ so that $\forall b \in \mathbb{Z}, \ ab = b$.

Truth value:

Justification:

Negation:

---

6. Statement: $\exists a \in \mathbb{Z}$ so that $\forall b \in \mathbb{Z}, \ ab = a$.

Truth value:

Justification:

Negation:
